PROC(5) Linux Programmer's Manual PROC(5) NAME top proc - process information pseudo-filesystem
DESCRIPTION topsbcl. This manual is part of the SBCL software system. See the README file for more
information. This manual is largely derived from the manual for the CMUCL system, which was produced at
Carnegie Mellon University and later released into the public domain. In software development, Make is a build
automation tool that automatically builds executable programs and libraries from source code by reading files
called Makefiles which specify how to derive the target program. In computing, protected mode, also called
protected virtual address mode, is an operational mode of x86-compatible central processing units (CPUs).
